

HOLTEC supplies log sorter to Scottish sawmill

Ridings Sawmills from Cardross in Dunbartonshire Scotland are currently replacing their existing log yard. The new log sorting line with 20 boxes, integrated butt

reducer and 3D scanner is being supplied by Holtec (Germany).

There will also be a VK Debarker integrated in the line. Also included in the project is a Baljer & Zembrod

Portal Crane. This rail-bounded crane will be used for emptying the sorting boxes, building up a stock of sorted logs and feeding the sawmill line.

The installation of the log sorting line is already underway and is scheduled for start-up in early 2016.

“ This concept has been conceived over the last 2 years after many discussions. By bringing these three proven suppliers together we will have a reliable and cost effective solution” said Frank Riding, Owner and Managing Director

HOLTEC
